WORKS

Berdahi Company exists since 2017. Four performances and a short film have been presented to this day, under the artistic direction of choreographer Mairi Pardalaki.

“Piccole Marquisakis” is a coming-of-age dance-theater piece telling the story of three young girls passing from their seemingly tragic solitude to their joyful, almost comical encounter.

“The Neutrino Passoire” is an arts & science performance initiated with physicist Dr. Kostas Nikolopoulos of the University of Birmingham. Merging dance and particle physics, the performance narrates in a simple way the story of the neutrino particle, thus reaching non-scientific audiences. For his work on "The Neutrino Passoire", Kostas Nikolopoulos was awarded the 2020 Public Engagement with Research Award from the European Research Council.

“The Strange Love” is a performance created alongside cellist Gaspar Claus, narrating the love story of a horse and a poplar tree. A dance-theater play for a public of all ages, based on the homonymous book by Christos Boulotis, “The Strange Love” uses text, dance and a musical theme of the 15th century called “Folia” to narrate how two beings from completely different worlds deeply understand each other.

“i wake up” is a short feminist film made in Istanbul, produced by the "Be Mobile Create Together" residency. Poetry meets performance, coming together on screen through images in stop-motion.

“Bam! Charge” is a short arts & science performance co-created and performed with a group of physicists, talking about plasma, the 4th state of matter. "Bam! Charge" uses artificial intelligence captors to create its original music score. It is co-produced with Sorbonne University.
